HTML ASSIGNMENT – 01 **BATCH : 114R**

K.Mohan Sai

Topics: Introduction to HTML, History of HTML, Structure of HTML, Basic HTML Tags, Formatting Tags, Links

Part A – Theory Questions

1. What is HTML?

HTML stands for **HyperText Markup Language**. It is the standard markup language used to create and structure webpages.

2. Why was HTML introduced?

HTML was introduced to create and structure documents that could be shared and linked through the World Wide Web.

3. What is the full form of HTML?

HTML stands for **HyperText Markup Language**.

4. Who introduced HTML?

HTML was introduced by **Tim Berners-Lee** around 1990–1991 while working at CERN.

5. Write a short note on the history of HTML.

HTML was introduced by Tim Berners-Lee around 1990–1991 at CERN. It was created to structure and link documents on the World Wide Web.

Major versions include:

1. **HTML 1.0** – Initial version
2. **HTML 2.0** – Standardized in 1995
3. **HTML 3.2** – Introduced in 1997
4. **HTML 4.01** – Released in 1999
5. **HTML5** – Introduced modern features such as audio, video, canvas, and semantic elements.

HTML5 is the foundation for structuring modern webpages.

6. What is the purpose of <!DOCTYPE html>?

<!DOCTYPE html> declares that the document is an **HTML5 document**. It helps the browser render the webpage using modern HTML standards.

7. Explain the basic structure of an HTML document.

```
<!DOCTYPE html>
<html>
<head>
  <title>My Webpage</title>
</head>
<body>
  <h1>Welcome to My Webpage</h1>
  <p>This is my first webpage.</p>
</body>
</html>
```

Purpose of the tags

- <!DOCTYPE html> → Declares that the document is HTML5.
- <html> → Root element of the HTML document.
- <head> → Contains information about the webpage.
- <title> → Defines the webpage title.
- <body> → Contains the visible content.
- <h1> → Defines the main heading.
- <p> → Defines a paragraph.

8. What is the difference between <head> and <body>?

<head>	**<body>**
1.Contains information about the webpage.	1.Contains the actual webpage content.
2.Usually not directly visible to the user.	2. Visible to the users
3.Contains elements such as <title>, <meta>, etc.	3.Contains elements such as <h1>, <p>, <img>, etc.
4.Provides information to the browser.	4.Displays content to the user.

9. What is an HTML tag?

An HTML tag is a special keyword enclosed in angle brackets < > that tells the browser how to create or display content on a webpage.

Example:

Hello World

10. What is the difference between opening and closing tags?

Opening tag:

- Marks the beginning of an HTML element.
- Written as <tag>.
- Does not contain /.

Example:

Closing tag:

- Marks the end of an HTML element.
- Written as </tag>.
- Contains /.

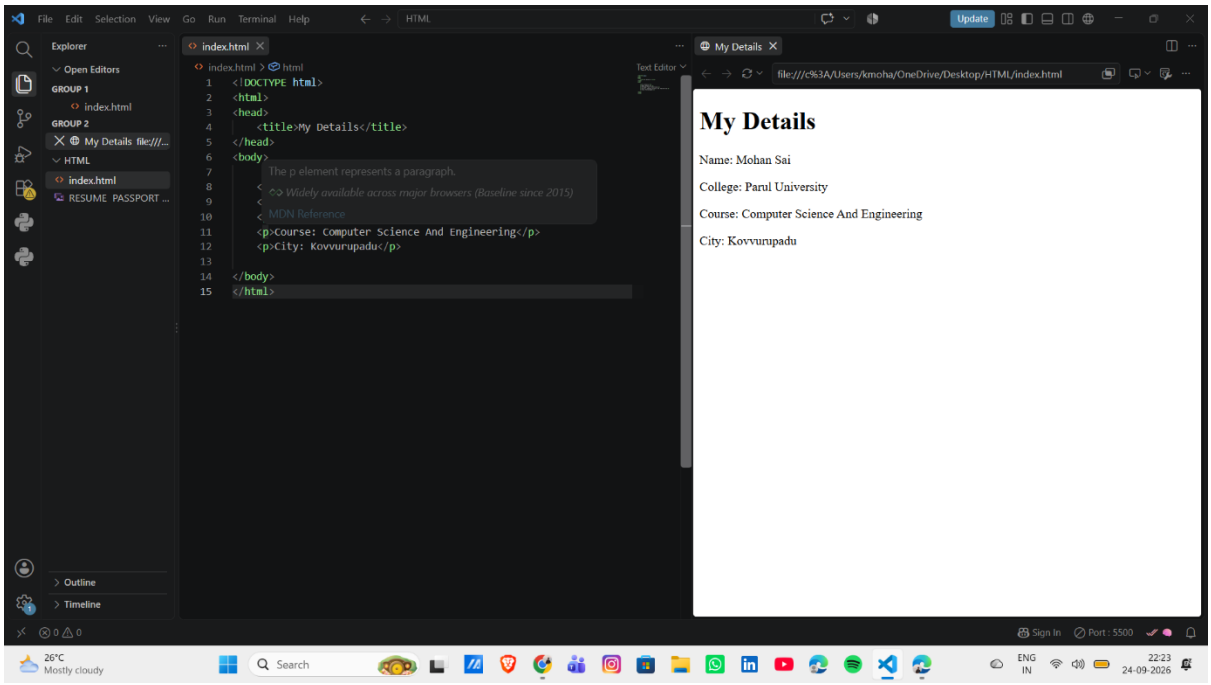

Example:

<u>Part B – Basic HTML Tags</u>

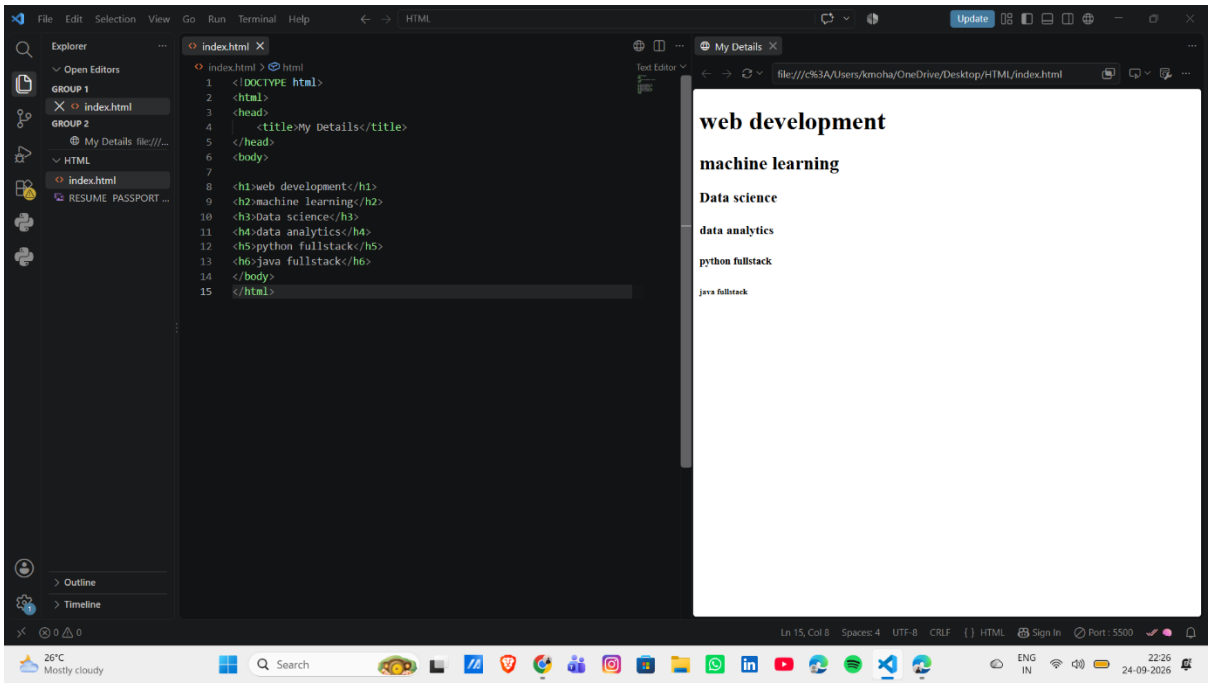

1.Write the use of <html>, <head>, <title>, <body>, <h1>–<h6>, ,
, and <hr>.

Tag	Use
<html>	Defines the root element of an HTML document
<head>	Contains information about the webpage
<title>	Defines the title displayed on the browser tab
<body>	Contains the visible content of the webpage
<h1> - <h6>	Create headings from largest/most important to smallest
	Defines a paragraph
 	Inserts a line break
<hr>	Creates a horizontal line

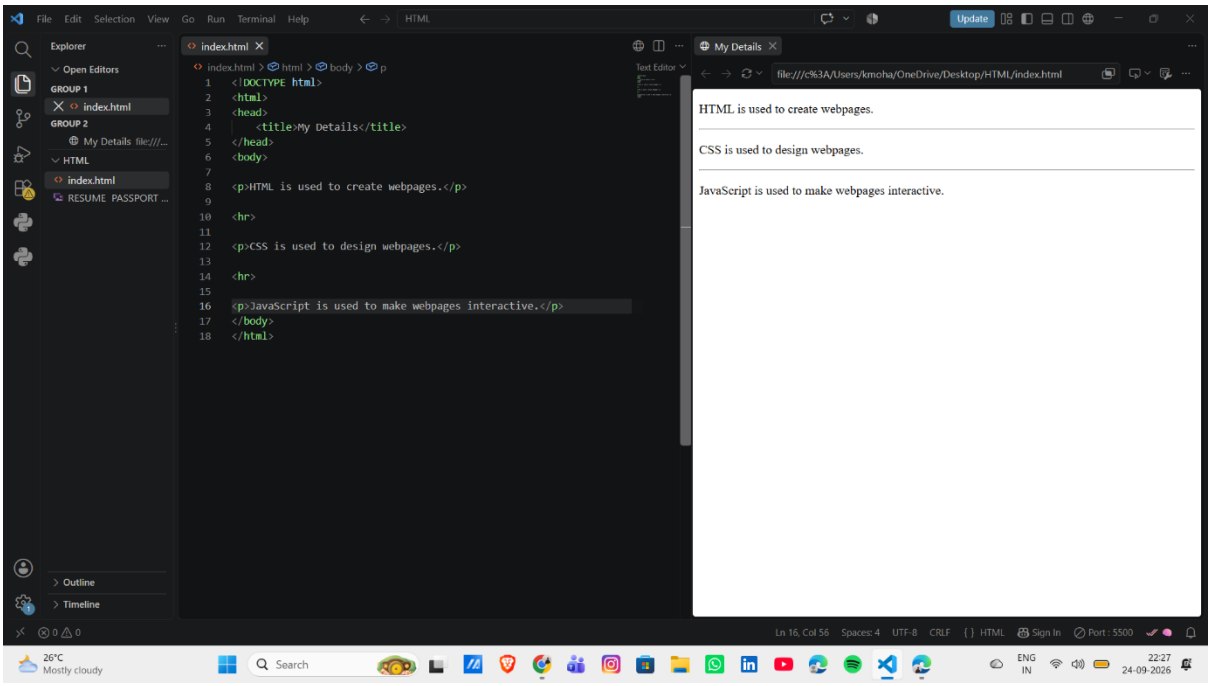

2.Write an HTML program to display your name, college name, course, and city.

3.Create a webpage using all six heading tags (<h1>to<h6>)

4.Create a webpage containing three paragraphs with a horizontal line between them.

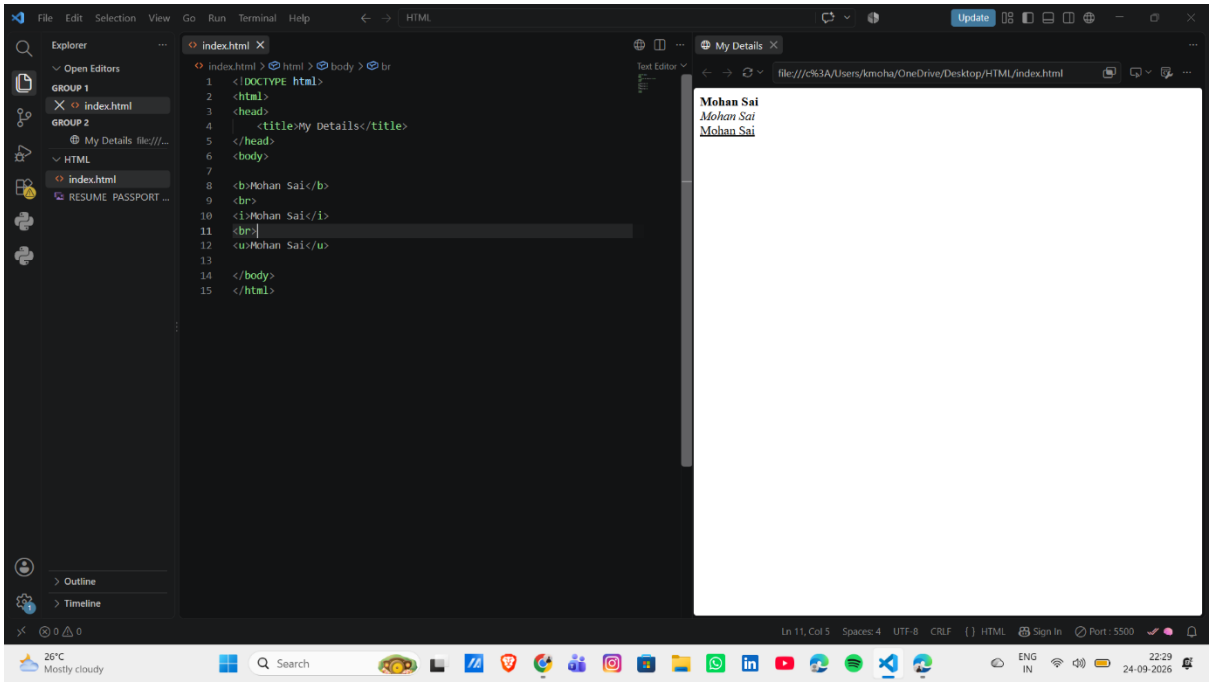

Part C – Formatting Tags

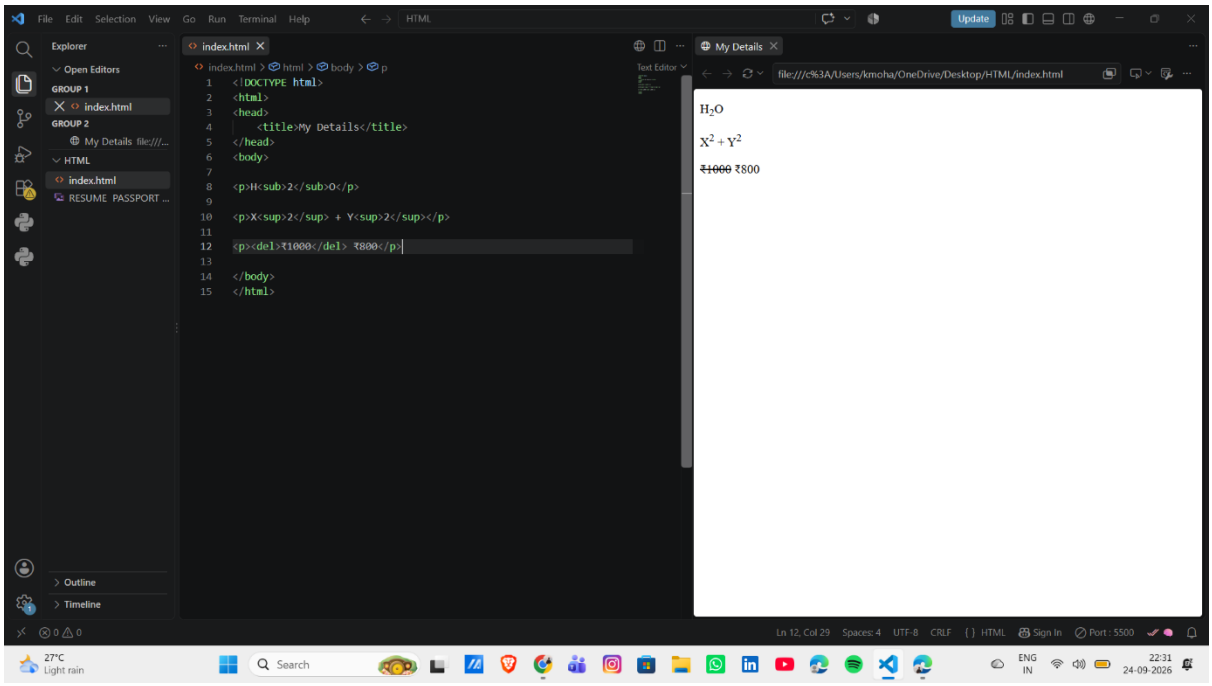

1. **Write the purpose of: <b>, , <i>, , <u>, <mark>, <small>, <del>, <sup>, and <sub>.**

Tag	Purpose
 	Makes text bold
	Indicates strong importance, usually displayed bold
<i>	Displays text in italic style
	Indicates emphasized text
<u>	Underline text
<mark>	Highlights text
<small>	Displays smaller text
<del>	Display deleted/strikethrough text
<sup>	Display superscript text
<sub>	Display subscript text

2. **Create a webpage showing your name using bold, italic, and underline formatting.**

3. **Write HTML to display H_2O, $X^2 + Y^2$, and ₹1000 as deleted price with ₹800 as current price.**

Part D – Links

1. What is a hyperlink?

A hyperlink is a clickable link that takes the user from one webpage or document to another webpage, file, or location.

2. Which HTML tag is used to create a link?

The <a> (anchor) tag is used to create hyperlinks.

3. What is the purpose of the href attribute?

The href attribute specifies the destination URL of a hyperlink.

4. Create a link to Google

```
<a href="https://www.google.com">Visit Google</a>
```

5.Create a link to YouTube

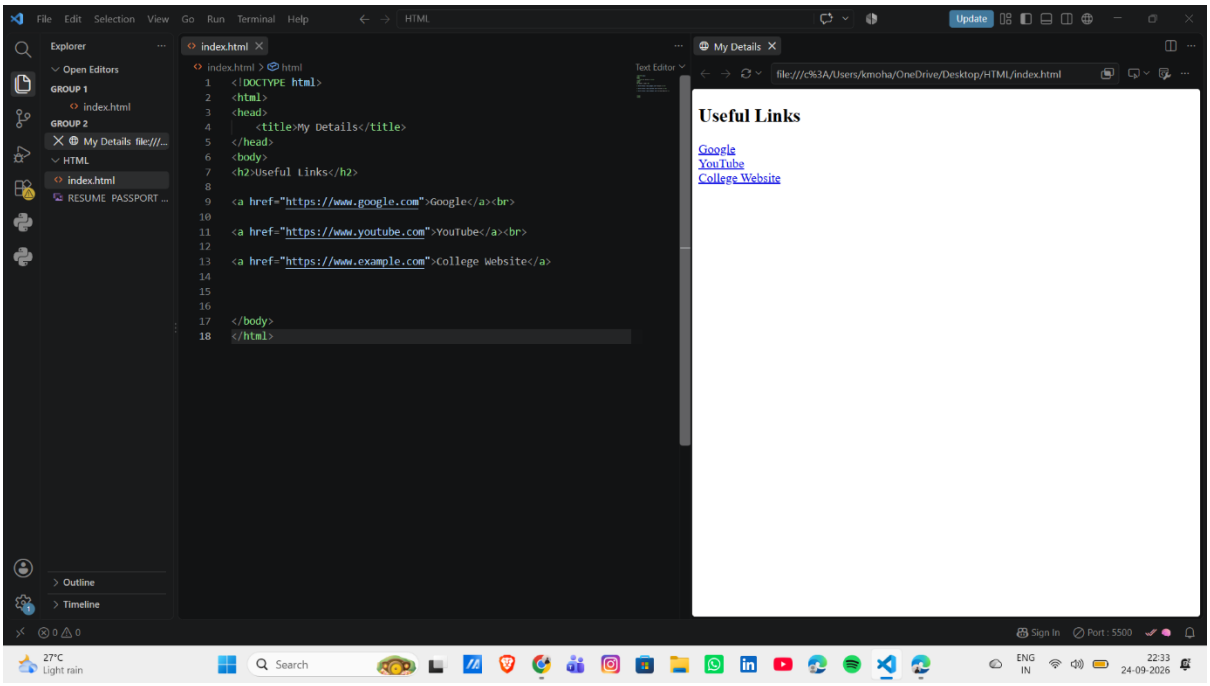

```
<a href="https://www.youtube.com">Visit YouTube</a>
```

6. Create a link that opens in a new tab

A.

```
<a href="https://www.google.com" target="_blank">
Open Google </a>
```

7.Links to Google, YouTube and College Website

Practical Task – My Profile Webpage

Create a simple “My Profile” webpage containing your name as the main heading, a short introduction, college name, course, city, at least 3 formatting tags, a horizontal line, and links to Google and YouTube
